230 L SPILL BUND FOR DRUMS AND TANKS

D03-RET-FT-002

Product data sheet · Spill containment

HDPE spill bund with a capacity of 230 L, fitted with a grating, for the static storage of drums or tanks of corrosive or non-corrosive products.

Technical data

Containment capacity	230 L
Material	HDPE
Accepted liquids	Corrosive and non-corrosive products
Resistance	Chemicals and UV
Grating	Yes
Dimensions (L × W × H)	1000 × 680 × 600 mm
Weight	19.5 kg

Description

The 230 L spill bund collects leaks and drips from the drums stored on its grating. Its containment capacity meets or exceeds the requirements of European, British and American regulations.

Advantages

- Grating with inspection openings and apertures for hands and pumps.
- Fork pockets: handling with most forklift trucks and pallet trucks.
- Made of polyethylene, fully recyclable, resistant to most chemicals and to UV.

Applications

The bund is suitable in particular for:

- non-road diesel, heating oil, diesel and petrol;
- AdBlue®;
- lubricants and oils;
- paints;
- other chemicals, for example chlorine, sodium hydroxide, nitric acid, hydrofluoric acid, hexafluorotitanic acid.

Safety

Storage on the bund must remain static. Remove the drum before moving the bund.
